

Battery care in the tropics

Heat and humidity age a lithium pack faster than distance does.

What actually wears a pack out

Not kilometres - time spent hot and full. A pack left at 100 per cent in a 34 degree afternoon ages measurably faster than one left at 60 per cent.

Numbers

Rated cycles	800 to 80% of original capacity
Warranty threshold	below 70% within 2 years
Storage charge	50 to 70 per cent
Storage temperature	indoors, out of direct sun
Charge port	must be dry before connecting

Air travel

Every pack we sell is well above the 100 Wh cabin limit, and lithium packs are not permitted in the hold. Ship the frame and source a pack at the other end - any of our service points can help.

AUMBIKE - Lot 12, Jalan Kemajuan, Seksyen 13, 46200 Petaling Jaya, Malaysia
